REQUIRED COMPONENTS			
To "meet specifications", your app must fulfill all of the crit			
Criteria	Does Not Meet Specifications	Meets Specifications	
Standard Design	- Opcomodiono	Ороспісацопо	
App does not redefine the expected function of a system		X	
icon (such as the Back button).			
App does not redefine or misuse Android UI patterns, such that icons or behaviors could be misleading or		X	
confusing to users.		^	
App includes a tablet layout which takes advantage of the			
additional screen space.		X	
App includes at least two distinct views and uses intents		×	
properly to move between these views.			
Navigation App supports standard system Back button navigation			
and does not make use of any custom, on-screen "Back		×	
button" prompts.			
All dialogs are dismissible using the Back button.		x	
Pressing the Home button at any point navigates to the		×	
Home screen of the device. Permissions			
App requests only the absolute minimum permissions			
that it needs to support core functionality.		×	
App does not request permissions to access sensitive			
data or services that can cost the user money, unless		X	
related to a core capability of the app. Performance and Stability			
Performance and Stability App does not crash, force close, freeze, or otherwise			
function abnormally on any targeted device.		X	
ContentProvider	1		
App implements a ContentProvider to access locally		Х	
stored data.			
Must implement at least one of the three			
If it regularly pulls or sends data to/from a web service or			
API, app updates data in its cache at regular intervals using a SyncAdapter.			
OR			
If it needs to pull or send data to/from a web service or		X	
API only once, or on a per request basis (such as a			
search application), app uses an IntentService to do so.			
OR			
If it performs short duration, on-demand requests (such			
as search), app uses an AsyncTask.			
App uses a Loader to move its data to its views.		X	
User/App State			
App correctly preserves and restores user or app state. For example, • When a list item is selected, it			
remains selected on rotation.			
 When an activity is displayed, the same activity 		X	
appears on rotation.			
User text input is preserved on rotation.			
When the app is resumed after the device wakes from		I	
sleep (locked) state, the app returns the user to the exact		X	
sleep (locked) state, the app returns the user to the exact state in which it was last used.		X
